Summary

Enthusiastic and experienced Full-Stack Developer with a strong foundation in building quality software and scalable systems. With a proven track record of leading teams, refining developer experiences, and delivering impactful projects, I excel at problem-solving and adapting to new challenges in fast-paced environments.

Quick Guide

- **Full-Stack Expertise:** Proficient in frontend technologies (React, Next.js, React Native) and backend frameworks (Node.js, FastAPI, Golang, Django).
- **Tech Leadership:** Experienced in leading development teams and driving architectural decisions.
- **Scalable & Robust Design:** Skilled in designing systems that efficiently handle high loads and ensure maintainability.
- **Cloud & DevOps:** Strong working knowledge of AWS, GCP, Terraform, and CI/CD pipelines.
- **AI & Innovation:** Proven experience in developing AI-based solutions, including fine-tuning GPT models to enhance chatbot capabilities.

Experience

- **Sr. Software Developer — Tech Lead — Cuilsoft** March 2024 – Present
 - Leading development efforts, mentoring team members, and driving key architectural decisions.
 - Spearheading projects that enhance product quality and operational efficiency.
- **Software Developer — Cuilsoft** June 2021 – March 2024
 - Developed internal tools, POCs, and customer-facing applications.
 - Collaborated on multiple projects, establishing coding practices that improved performance.

Projects at Cuilsoft

- **Flora**
 - Developed a fertility insurance application to streamline insurance claims and user management.
 - Designed and implemented the backend using Golang and PostgreSQL, ensuring high performance and scalability.
 - Built the frontend using Next.js, TanStack Query, and Zustand for state management and efficient data fetching.
 - Integrated secure authentication and authorization workflows to protect sensitive user data.
 - Enhanced user experience with dynamic forms and real-time updates for claim processing.
 - **Tech Stack:** Golang, PostgreSQL, Next.js, TanStack Query, Zustand.
- **Tradecafe**
 - Upgraded a React Native application from v0.53 to v0.73, ensuring compatibility with modern libraries and improved performance.
 - Developed buyer's application components, including dynamic data tables, advanced filters, screen layouts, and efficient data fetching mechanisms.
 - Integrated push notifications using OneSignal and secure authentication workflows to enhance user engagement and security.

- Implemented infinite scrolling with rapid refresh capabilities to efficiently handle thousands of documents without performance degradation.
- Used TanStack Query for optimized data fetching and Zustand for state management, improving application responsiveness.
- **Tech Stack:** React Native, TanStack Query, Zustand, OneSignal, Firebase.

• Quartermaster Chatbot

- Designed and developed an AI-based chatbot for Quartermaster, a platform for finding household assistance, using Next.js for frontend and Python for backend.
- Implemented vector search for efficient retrieval of relevant data and responses, improving user experience.
- Introduced innovative methods for booking appointments and tailored professional searches, streamlining the process for users.
- Created a conversation tagging system for internal teams to mark conversations as good or bad, enabling better training data for AI models.
- Fine-tuned GPT-4o on Azure AI Foundry using tagged conversations, significantly enhancing chatbot performance and accuracy.
- **Tech Stack:** Next.js, Python, Azure AI Foundry, GPT-4o, PostgreSQL.

• Padder

- Developed and deployed an end-to-end rent guarantor system, enabling seamless user onboarding and rent guarantee processes.
- Integrated third-party providers for insurance and KYC verification, ensuring compliance and security.
- Implemented a Stripe payment system for secure and efficient transactions.
- Designed dynamic forms for questionnaires, invitations, and authentication using Clerk, improving user experience and flexibility.
- Built an admin panel to manage approvals, monitor system activity, and provide additional functionalities for administrators.
- Used GraphQL for efficient data querying and manipulation across the system.
- **Tech Stack:** React, Node.js, GraphQL, Stripe, Clerk, AWS.

• PerfectDraft

- Developed a checkout page using vanilla JavaScript, ensuring lightweight and fast performance.
- Created a reusable form management library (implemented as a `Form` class) supporting subscription to form/field changes, JSON schema-based validation, default values, and state management.
- Enhanced maintainability through multiple reusable functions, reducing code duplication and improving scalability.
- **Tech Stack:** JavaScript, JSON Schema, HTML, CSS.

Personal Projects

• Go HTMX Task Manager (GitHub: github.com/Badhan-abhishek/go-htmx-2)

- A task manager built using Go, HTMX, Gorm, and TailwindCSS for efficient project and task management.
- Features include task creation, editing, and deletion, with real-time updates using HTMX.
- **Tech Stack:** Go, HTMX, Gorm, TailwindCSS, SQLite.

• RNAM (GitHub: github.com/Badhan-abhishek/rnam)

- A simple web application that generates random user data for testing purposes.
- Supports customizable data generation for various fields, including names, emails, and addresses.
- **Tech Stack:** React, Node.js, Express.js, MongoDB.

Education

- **Bachelor of Technology in Computer Science** — Kurukshetra University August 2016 – December 2020

Skills

TypeScript (Advanced)

JavaScript (Advanced)

Python (Intermediate)

Golang (Intermediate)

React / Next.js (Advanced)

React Native (Intermediate)

Node.js / FastAPI / Django (Intermediate)

GraphQL (Intermediate)

TanStack Query (Intermediate)

Zustand (Intermediate)

Terraform (Intermediate)

AWS / GCP (Advanced)

Git (Intermediate)

Docker (Intermediate)
